# 10 Individual Contribution Statement

**Team:** TEAM018 **Member:** M Mahadev (2025mb26043). This is a single-member team.

Since I worked alone, I covered all the suggested roles from the packet:

| Role | Owner | What it covered |
|---|---|---|
| Product strategy lead | M Mahadev | Topic choice, problem framing (Phase 1), vision, JTBD, build vs buy, first wedge |
| PM artifacts / PRD lead | M Mahadev | Problem statement, PRD-lite, RICE prioritisation, MVP, roadmap with proof gates, success metrics |
| UX and workflow lead | M Mahadev | Reviewer journey, screens, trust and uncertainty design, human-in-the-loop |
| Data / evaluation lead | M Mahadev | Labelling approach, baseline, evaluation framework, go/no-go thresholds, synthetic evaluation |
| Prototype / build lead | M Mahadev | Offline web prototype and sample data |
| Business / risk lead | M Mahadev | Economics and scaling note, ethics, governance and risk note |

**How AI was used:** Claude was used to draft documents and write the prototype code, as described in 09_AI_Collaboration_Log.md. I reviewed the outputs, made the product and risk decisions listed there, and I am responsible for everything in this submission.

**How outputs were validated:** the evaluation numbers were checked by running the prototype's scoring code, and I went through each document against my Phase 1 framing and the assignment packet's checklist.
